A.R.T. DEMOLITION CASE STUDY

Our Approach:

Rilmac were required to remove licensed asbestos from a former office block. The block had been heavily vandalised and we approached this alongside A.R.T to ensure the work could be carried out safely, efficiently and quickly. This involved extensive soft stripping and vast sheeting internally to segregate the non-asbestos areas. The work was subject to a tight deadline which required a large team of operatives on the site to ensure completion. The dedicated Rilmac team worked additional hours on Christmas Eve to achieve this.

Customer Benefits:

Completion on Christmas Eve allowed A.R.T to salvage more areas of the building, rather than them become contaminated, and allowed them to begin work straight after the Christmas break to ensure no time was wasted.

Customer Comments:

“A great effort by Ryan and his team to get this project completed in a short space of time. A thoroughly professional job from the outset and credit must go to Nick and his team on site for their safe approach to completing the work.”
