COVENT GARDEN FLOWER MARKET CASE STUDY

Rilmac Insulation Limited completed the thermal insulation of associated Low Temperature Hot Water, Cold Water and Chilled Water pipework throughout the new Covent Garden Flower Market, London. Hundreds of metres of various sized pipe work were insulated internally, this included individual metred units and communal areas. Pipework on roof levels were insulated and weatherproofed with a modern Ventureclad finish. Within the upper level units, ventilation ducts were also insulated. All pipework with plantroom areas were clad with aluminium sheeting and all valves, flanges, etc. insulated with purpose made removable insulation jackets to a high standard ensuring a professional look. Overall the project was a success and Neville Tucker were very happy with the quality of the work completed.
