Scaffolding

WILLMOTT DIXON CASE STUDY

Our Approach:

This project required a great deal of planning from the outset with the roadside elevations requiring extra thought due to a concrete plinth which protrudes by approximately 2m. The front elevation had to be extensively back propped underneath the concrete plinth and a beamed section was erected to carry the substantial load. One additional safety measure taken was to fully ply board all the scaffolding on the ground. On completion of the external scaffold on the roadside elevations, the scaffold was enclosed in 'Envirowrap'. This provided a fully enclosed working platform and additional protection to the public.

Customer Benefits:

This project's extremely tight deadlines were met with extra manpower and by meeting them it enabled the client to begin the refurbishment works without delay.

Rilmac Scaffolding Limited were awarded top marks by the Willmott Dixon Health & Safety Officer during a safety audit. Comments also made conveyed how Rilmac had gone above and beyond in their service to provide a scaffold that was of the highest quality.
